

IN THE ABSTRACT:

Please amend the abstract as follows:

The tool consists of a strip of cardboard (1A, 1B) with a hole (3) in an intermediate position and at least one weakening for a transverse fold (5) coinciding with the hole, so as to delimit two facing leaves (1A, 1B); the neck of the vial (F) is introduced into the hole (3) and the leaves (1A, 1B) are able to be arranged alongside the neck ~~[[©]]~~ (C) of the vial and receive the action of the fingers (fT) in order to break the neck.
